

Interlaboratory exchange test for standardization of the enzyme activity of neutral lactase activity and arylsulfatase including DSM Food Specialties

Esslingen, 2016-03-01, the Analytics Department of the BioTeSys GmbH offers the determination of enzyme activities of neutral lactase activity (NLU) and arylsulfatase (ASU). The validation of the used method is verified by an interlaboratory exchange test including the laboratory DSM Food Specialties.

The two mentioned enzyme activities are quality-relevant parameters in the food sector; particularly for the production of lactose free dairy products. These products have complex requirements on analytical approaches and preanalyses. The methods were established in cooperation with different producers of pharmaceuticals, nutraceuticals or food supplements such as DSM in order to secure independent and reliable analysis results with a high standardization.

DSM Food Specialties is the leading provider of lactose free solutions, and have selected BioTeSys for its accuracy and reliability.
